

>be me, data troll

---

Loren Velasquez

# Y tho

## Goal:

Super simple example of how python can make nice with a database (\*cough\* postgres)

Show how simple it is to use python to interact with postgres while having incredible amounts of amazing fun

#parseltongue #parselmouth #python #postgres #hashtagforhashtags #octothorpe #pound

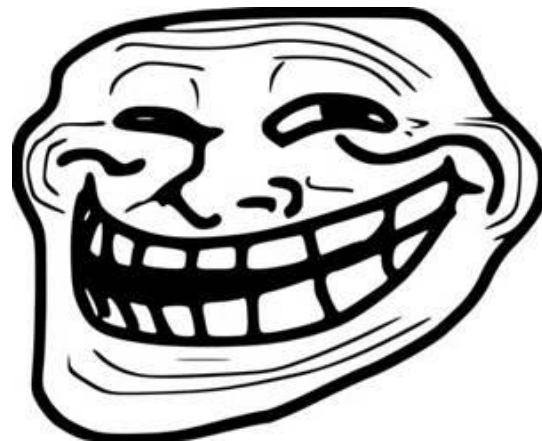

# Scenario

You are the data troll who allows what data can be pushed up.

All data requests are in your hands.

But first, you need to become an official data troll by getting your information in the data troll table (you need to be legit in the database or else it didn't happen...)

# lolwut?

Pushing data to table `user_scratch.data_trolls`

Fields you'll be updating via command line:

- Name (text)
- Favorite Color (text)
- Title (text)
- Enjoyed (boolean)

Go look at code now...

[code](#)

End scene
